

PRESS RELEASE

RECYCLE NEWS FROM BCA INDUSTRIES

US PATENT AWARDED TO BCA INDUSTRIES ON NEW CLASS OF SHREDDER

FEBRUARY 1, 2012 | MILWAUKEE WI.

A new design called **THE SINGLE 50** combines the benefits of both a dual shaft shredder and granulator into a “single pass” system doubling product output while cutting power consumption and cost. **BCA Industries** will first display the patented machine at the 2012 Waste Expo in Las Vegas May 1-3. This new concept in waste reduction provides accurately sized material shredded in one pass without a screen. A successful BETA test of the machine in a production line has been operating and producing crumb rubber and mulch since the start of 2011. The equipment is already available and can be ordered in custom sizes and horsepower.

The innovation in the recycling industry continues to progress with this technology applicable to wood, rubber, fiber and many other materials. Doug Bartelt, President of BCA Industries known best for their PD1000 portable shredders says “The whole industry has to continue to invent processes that cut power consumption and costs but a system can’t be truly green unless it’s built to last. Shredders of all types have to be designed with sustainability as well as durability in mind”.

BCA Industries still produces all of their product line in the USA with the hydraulic motors built for them by White Drive Products.
